Steam traction engine at a quarry, circa 1900. The engine, with a man by the flywheel, is shown at the quarry where it was used to haul a wharf on the cab roof. Note the handle on the ship's body support frame for starting tidal chains when hoisted in or out of the quarry.

Alfred George Coulthard

Trotty beside the embankment to the lime kiln site in 1955, with the plaque removed on the front. F. J. Scott
